PRAJWAL L CHAWDA

Cybersecurity Analyst | Penetration Testing & Threat Intelligence | AI-Powered Security Automation
Bangalore, India | +91 9448346539 | chawdaprajwal@gmail.com
linkedin.com/in/prajwal-l-chawda-9b4685254 github.com/brandy-build

SUMMARY

Cybersecurity analyst with hands-on experience in penetration testing, threat intelligence automation, and AI-powered security tooling. Skilled in Python, offensive security tools, and building end-to-end automation pipelines for detection, response, and secure software delivery.

TECHNICAL SKILLS

- **Offensive Security & Pen Testing:** Burp Suite, OWASP ZAP, Nmap, Nuclei — web app vulnerability assessment, exploitation, bug bounty
- **Threat Intelligence & Detection:** Wireshark, Shodan, VirusTotal — IOC enrichment, traffic analysis, automated alerting
- **Security Automation & Orchestration:** n8n, Docker, Kafka, GitHub Webhooks — workflow automation, containerized pipelines
- **AI/ML for Security:** Python, CodeT5, Ollama — ML-integrated detection models, LLM-assisted code analysis
- **Software & Web Development:** JavaScript, React, Next.js, Node.js, Flask, FastAPI, MongoDB, Supabase — REST APIs, full-stack apps
- **Cloud & DevOps:** AWS, CI/CD, Git — containerization and version control

PROFESSIONAL EXPERIENCE

Ethical Hacking Trainer — 15-Day Offline Workshop — Agamya Cyber Tech, at SSIT Tumakuru, Karnataka *Aug 11 – 26, 2026*

- Represented Agamya Cyber Tech to deliver a hands-on Basics of Ethical Hacking workshop; had students build and break easy-to-medium vulnerable lab machines.
- Set up personal Active Directory labs (Windows 10 target, Kali attacker, Domain Controller) and taught AD attacks from initial access to privilege escalation.
- Trained defensive-track students on Splunk Enterprise & Universal Forwarder for log analysis, Autopsy for forensics, and Nessus for vulnerability scanning.
- Ran live-target VAPT exercises with vulnerability report writing, plus sessions on recon, Google Dorking, OWASP Top 10, and core networking fundamentals (OSI, TCP/IP, routing).
- Delivered tool-based offensive/defensive sessions per student interest using HackingHub CTFs, and covered the Cyber Kill Chain and MITRE ATT&CK frameworks.

Junior Security Analyst — Agamya Cyber Tech, Bangalore *Sep 2025 – Nov 2025*

- Conducted web application vulnerability assessments and bug hunting across multiple client targets, identifying and helping remediate critical security flaws.
- Built and deployed a custom ML-integrated phishing detection tool that automated threat simulation and cut manual analysis time.
- Authored vulnerability disclosure reports with remediation recommendations, following responsible-disclosure practices.

Cybersecurity and Penetration Testing Intern — Hacktify, Bangalore *Feb 2025 – Mar 2025*

- Executed structured ethical-hacking exercises covering the OWASP Top 10, vulnerability assessment, and pen-testing methodologies.
- Performed network traffic analysis and exploitation using Wireshark and Burp Suite across simulated environments; achieved top evaluation scores.

PROJECTS

Jev Companion — AI Decision Intelligence for Coding Agents *(Rust, MCP, Jev, Git, SQLite)*

- Built a Rust-based decision layer that evaluates proposed AI coding-agent actions against repository context, intent, and engineering risk.
- Integrated typed probabilistic decisions (Jev) with MCP to return structured verdicts, conditions, verification requirements, and decision logs.
- Built an evaluation loop comparing agent outcomes with and without decision feedback across test failures, rework, and human intervention — can be extended to score and gate any AI agent's actions before they run.

AutoHawk — Threat Intelligence Orchestrator *(n8n, Docker, VirusTotal, OWASP ZAP, Shodan, Nuclei)*

- Engineered an automated pipeline that scanned 500+ endpoints, flagged 30 high-risk domains, and delivered real-time alerts via Discord/Slack, cutting manual threat-intel effort by 80%.

Orchestr_AI — Secure CI/CD Orchestrator *(Python, Kafka, Docker, React, CodeT5, GitHub Webhooks)*

- Built an event-driven CI/CD orchestrator with ML-based (CodeT5) code vulnerability detection, containerized microservices, and async Kafka communication for fault tolerance.

AegisSOC — AI-Powered Security Operations Center *(Python, FastAPI, Next.js, Kafka, MongoDB, Ollama, Docker)*

- Built a full-stack SOC platform with real-time Wazuh alert ingestion via Redpanda (Kafka), automated IOC extraction, and multi-source enrichment (VirusTotal, AbuseIPDB, AlienVault OTX).

ACHIEVEMENTS & PUBLICATIONS

- GenCys CTF 2026 — 12th place (national finals) | CyberHX CTF 2026 — 20th place (finals) | Smart India Hackathon & Intel AI Hackathon — national-level participant.
- Co-authored research paper on DNA-based data storage technology.

EDUCATION

B.Tech CSE (Cybersecurity) — Garden City University | 2022 – 2026 | CGPA: 9.06

Languages: English · Hindi · Kannada · Gujarati · Odia
